# IPCC 4AR Model Output Database

**IPCC (Intergovernmental Panel on Climate Change) Fourth Assessment Report will be released in 2007**

**In September, 2003, PCMDI was asked to host the climate model database for the IPCC Working Group I (WG1).**

- *WG1 focuses on the physical climate system: atmosphere, land surface, ocean, and sea ice*
- *Data from ~20 coupled ocean-atmosphere models*

**WG1 specified the 12 scenarios to be run, and the data to be submitted.**

*Table of Experiments.*

	Experiment Name	Monthly Data and Yearly Data (Extreme Indices) (submit for each member of ensemble)	Daily Data (temperature and precipitation data should be submitted for each member of ensemble, but all other fields should be submitted for only a single ensemble member)	3-Hourly Data (submit for a single ensemble member)	Notes
1	pre-industrial control experiment	> 100 years (~500 years)	40 years that can best be compared to years 1961-2000 (i.e., through the end of year 2000) of the 20C3M expt.	last year of reported daily data (i.e., corresponding to year 2000 of the 20C3M expt.)	control for experiments 3-7 and for some models also the control for experiments 8-9. There will be no anthropogenic or natural forcing in this control. The control experiment should be long enough to extend to the furthest point in time reached by the end of the perturbation experiments (which presumably branch from it). Thus the control should allow us to subtract any residual, unforced drift from all perturbation simulations.  for most models this experiment is not needed, but for

# Scenarios

# Models

Modeling Center	Model	Modeling Center	Model
BCCR, Norway	BCM 2.0	IAP, China	FGOALS1.0_g
CCCma, Canada	CGCM3.1	INM, Russia	INMCM3.0
CCSR/NIES/FRCGC (hi-res), Japan	MIROC3.2 (hi- res)	IPSL, France	IPSL-CM4
CCSR/NIES/FRCGC (med-res), Japan	MIROC3.2 (med- res)	MPI, Germany	ECHAM 5 / MPI-OM
CNRM, France	CNRM-CM3	MRI, Japan	MRI- CGCM2.3.2a
CSIRO, Australia	CSIRO Mk3.0	NCAR (CCSM3), USA	CCSM3.0
GFDL (CM2.0), USA	GFDL_CM2.0	NCAR (PCM1), USA	PCM1
GFDL (CM2.1), USA	GFDL_CM2.1	NCC, China	CSM T63 (Temporal)
GISS (C4x3), USA	C4x3	UKMO (HadCM3), UK	HadCM3
GISS (Model E-H), USA	Model E-HYCOM	UKMO (HadGEM1), UK	HadGEM1
GISS (Model E-R), USA	Model E-Russell		

# IPCC Process

***~300 diagnostic subprojects have registered with the IPCC***

- Primary user community in the early stage

***The IPCC process is deadline driven. Among the important dates affecting the Model Output database:***

- Fall, 2004 - Modeling groups begin submission of data
- March, 2005 - Workshop on Analyses of Climate Model Simulations for the IPCC AR4. Preliminary results from diagnostic subprojects.
- May, 2005 - Papers submitted to peer-reviewed journals, available to IPCC lead authors
- December, 2005 - Papers accepted for publication in a peer-reviewed journal

# ***IPCC WG1 4AR Database***

***The IPCC deadlines imposed time constraints for development of the Model Output database:***

- Fall, 2004 - Initial data submissions, data organized, cataloged, available for download
- Spring, 2005 - Populated database, up to 40TB capacity

***The nature of the data, IPCC process, PCMDI experience set technical requirements:***

- Data to be organized one variable per file
- Multifile download capability (e.g., ftp mget)
- CF metadata standard conformance + additional constraints
- Registration, approval of users by IPCC
- Search by variable, scenario, modeling group, temporal frequency

***January, 2004***

- Purchased 40TB RAID server
- Began port of Earth System Grid, adaptation for IPCC

# ***Model Output: Metadata***

---

## ***CF compliance***

- Time encoding, calendars, standard name, grid/axis boundaries...

## ***Identification of datasets***

- Scenario: 12 defined experiments
- Submodel: Atmosphere, ocean, land surface, sea ice
- Frequency: 3-hourly, daily, monthly, yearly, fixed
- Run number: Ensembles
- Model Identification: 22 modeling groups
- Variables: Short name, long name

## ***Variable/Frequency/Submodel grouped into Tables:***

- A1: monthly atmospheric
- O1: monthly ocean
- A2: daily atmospheric
- ...

# Data can be viewed in different ways

## Portal:

- Model -> Scenario -> Run -> Frequency -> Variable/Submodel -> Files

# Views of data

## FTP

- Scenario -> Submodel -> Frequency -> Variable -> Model -> Run -> Files

## Search by Variable

QUERY: scenario=any, model=cccma\_cgcm3\_1, frequency=monthly, variable=temperature

### Download Files

# Search

***ESG search capability  
extended to support search  
on:***

- Model
- Scenario
- Frequency
- Variable

***and return:***

- Datasets
- Files

**Data Search**

**Find all Datasets with:**

Scenario: --Any--  
Model: --Any--  
Frequency: --Any--

**-or-**

**Find all Files with:**

Scenario: Climate of the 20th Century experiment  
Model: National Center for Atmospheric Research, CCSM3.0  
Frequency: Monthly/Fixed  
Variable: air temperature

# ***ESG-II Data Portal was adapted for Model Output database***

***Summer, 2004 - ESG-II data portal transferred to PCMDI, adapted to IPCC requirements***

- Metadata search extended for scenario, variable, ...
- Portal registration enables access to portal and FTP server

***November, 2004 - Opened database for registration, downloading***

- Most data transferred by 1TB disk
- CMOR software (Doutriaux, Taylor, Peterschmitt) used by most groups to comply with standards

***What we expected:***

- ~100 users
- Modeling groups would send data on one or two disks
- Relatively static database - some updates, corrections

# Production period (Nov 2004 - Present)

## What actually happened (5/27/05):

- ~350 users
- 37TB downloaded in 192,000 files
- ~23TB cataloged, online, 50,000 files
- Relatively dynamic database - *many* corrections, resubmissions

# Errata

***Errata page details problems with data, resubmission of files. About 70 entries to date.***

Errata

Date	Model(s)	Files	Description	Status
11/10/04	ncar_pcm1	cl_A1.20C3M_2.PCM1.atmm.1940-01_cat_1949-12.nc tro3_A1.SRESA1B_2.PCM1.atmm.2010-01_cat_2019-12.nc	Time array is invalid, has zero values at the tail end.	12/10/04 New data files are available.

## ***Future work***

---

### ***Adapt current ESG-II work on aggregation server***

- In testing phase

### ***Expect database to be a valuable resource for several years to come***

- Enlarge user group
- Continue to accept new data, data corrections

### ***Expect volume of downloads to level off after Summer, 2005***
